Natural Protection for Your Garden

TRICO® Garden is a specially developed formulation that protects against deer damage in the home & garden setting. Formulated as a liquid, TRICO® Garden, once diluted, is applied to the parts of the plant to be protected. With a flexible application rate that can be adjusted to suit the area of application, size of the plants, plant density and the pressure of deer browsing. TRICO® Garden is applied by means of a handheld or knapsack sprayer.

Your Benefits

Based on a natural active ingredient

TRICO® Garden is based on a sustainably sourced natural active ingredient. It is formulated to ensure excellent compatibility that is safe to plants, humans and animals. TRICO® Garden protects ornamental plants, shrubs and trees against deer browsing.

Dual mode of action

TRICO® Garden exhibits a dual mode of action, it repels deer through smell and taste. TRICO® Garden prevents browsing, without harming the deer. Based on a tried and trusted technology, TRICO® Garden brings 'Innovation from Tradition'.

Long lasting protection

TRICO® Garden builds upon a European track record of more than 20 years of satisfied customer use. Its excellent rain resistance provides long lasting protection.

Practical spray application

TRICO® Garden is a concentrated product, once correctly diluted, can be applied quickly and simply. Apply using a handheld sprayer fitted with a medium nozzle.

Ecological information	Harmless to humans, animals and plants

When to use TRICO® Garden

Apply at the first signs of damage. TRICO® Garden can be used in Spring and Autumn.

How to use TRICO® Garden

TRICO® Garden is applied as a dilute spray to ornamental plants, shrubs and trees.

Dilute 1 part TRICO® Garden with 3 to 5 parts water, depending on the level of deer pressure. Apply using a handheld or knapsack sprayer fitted with a medium nozzle.

A single application may be sufficient to repel deer but if the risk of damage persists a second application can be made 28 days after the first application. A maximum of four applications are permitted per annum.

Tried and tested

TRICO® Garden has been found to be safe to use on all species of hardwoods and conifers during the autumn/winter period.

In addition, no phytotoxic effects following a spring/summer application have been recorded on the following plant species: Geranium sp., Roses, Daisies, Viola sp., Forsythia sp., Laburnum, Weigela, Begonias or Salvia sp.

It is strongly recommended that a single plant is treated first to ascertain whether phytotoxic effects are evident before treating large areas.

Plant safety

During hot weather carry out the application in the morning or evening as in high temperatures and intense sunlight there is a risk of damage to soft tissue such as leaves and young shoots.

To be effective the application must dry on the target. DO NOT apply if rainfall is expected
